

Neural, Parallel & Scientific Computations

Volume 23, 2015

CONTENTS

George A. Anastassiou Approximation by Interpolating Neural Network Operators	1
Y. Li, M. Li, and Y. C. Hon Improved Finite Integration Method for Multi-Dimensional Nonlinear Burgers' Equation with Shock Wave	63
A. Elhassanein Complex Dynamics of a Forced Discrete Viral Infection Model with Virus-Driven Proliferation of Target Cells	87
Dhanya Shajin, B. Lakshmy, and R. Manikandan On a Two Stage Queueing-Inventory System with Rejection of Customers	111
Md Shafiqul Islam Piecewise Linear Least Squares Approximations of Invariant Measures for Random Maps	128
Qian Zhang, Quanyong Zhu, and Zhiyue Zhang Finite Volume Element Method for the Stochastic Advective-Dispersive Equation in Porous Media	137
P. K. Pandey Geometric Mesh Exponential Finite Difference Method for the Numerical Solutions of Non-Linear General Two Point Boundary Value Problems	153
Ross A. Chiquet, Patricio Jara, and Kevin W. Zito Approximate Solutions of Abel's Equation Using Rational Inversion of the Laplace Transform	169
Ross A. Chiquet, Tyler Montgomery, Baoling Ma, Azmy S. Ackleh A Matrix Population Model of Beaked Whales	179
Tchavdar T. Marinov, Rossitza S. Marinova, and Aghalaya S. Vatsala Coefficient Identification in Euler-Bernoulli Equation from Over-Posed Data	193
J. Diego Ramirez and Aghalaya S. Vatsala Generalized Monotone Iterative Techniques for Caputo Fractional Integro-Differential Equations With Initial Condition	219

Jianmin Zhu Quenching Behavior of Initial-Boundary Value Problem for a Generalized Euler-Poisson-Darboux Equation	239
Bhuvanewari Sambandham and Aghalaya S. Vatsala Numerical Results for Linear Caputo Fractional Differential Equations with Variable Coefficients And Applications	253
Hsin-Chu Chen A Highly Parallel Algorithm for Solving Poisson Equation Using Block Decompositions	267
A. Elhassanein A Stochastic Discretized Version of a Stage-structured Predator-prey Model	277
Navnit Jha Convergence Analysis of Exponential Expanding Meshes Compact-FDM for Poisson Equation in Polar Coordinate System	293
N. S. Nilakantan Monte Carlo Simulation in Business Applications	307
S. Abbas, D. Bahuguna, E. B. M. Bashier, and K. C. Patidar Pseudo Almost Periodic Mild Solutions of Quasilinear Functional Differential Equations With Application to Mathematical Biology	318
D. Pokhrel, A. Nduwimana, and X. Q. Wang Quantum Confinement in Core-shell Structures	335
Udhaya S. Ravishankar A Lyapunov Based Adaptive and Stable Neural Network Weight Regularization Algorithm	343
Saroj Kumar Sahani Effects of Intracellular Delay and Immune Response Delay in Hiv Model	357
Biswanath Samanta Single Multiplicative Neuron Model as an Alternative to Multi-layer Perceptron Neural Network	367
Amit Setia, Bijil Prakash, and A. S. Vatsala Numerical Solution of Fourth Order Fractional Integro-Differential Equation by Using Legendre Wavelets.	377
Amit Setia, Vaishali Sharma, and Yucheng Liu Numerical Solution of Cauchy Singular Integral Equation with an Application to a Crack Problem	387
R. Sivasamy and K. Thaga Discrete Time Poisson Queues Operated by Two Heterogeneous Servers under 'First Come First Served' Queue Discipline	393

Haiyan Tian, Hongmei Chi, and Yanzhao Cao Comparing Two Types of Bases for Solving Elliptic Boundary Value Problems	411
Wei Wan, Yuanyuan Peng, and Brandon I. King The Study of Optimal Strategy for Selling Tickets For a Sporting Event	421
Wei Wan, Yuanyuan Peng, and Brandon I. King Optimal Control Strategies to Attract Students Between Local Colleges	433
Teshome Balkew and Negash Medhin Stability and Control Analysis of an HIV Treatment Model	447
A. Krishnamoorthy and Manjunath A. S. On Priority Queues Generated Through Customer Induced Service Interruption	459
Parkavi. K, Swaminathan. A, and Vivekanandan. P Dynamic-trust Model for Monitoring Malicious Node Oscillating Behavior in Manet Using Satisfaction and Feedback Credibility	489
Content	499
Author Index	503
