

Dynamic Systems and Applications

Volume 27, 2018

CONTENTS

Alka Chadha, S. N. Bora, and R. Sakthivel Approximate Controllability of Impulsive Stochastic Fractional Differential Equations with Nonlocal Conditions	1-29
G. Yin and G. Zhao A Limit Result Associated with Certain Random Two-point Boundary Value Problems	31-43
Urvashi Arora and N. Sukavanam Approximate Controllability of Semilinear Fractional Stochastic System with Nonlocal Conditions	45-62
Pekka Kosunen Periodic Orbits of Quadratic Polynomials of Periods Six and Seven	63-106
Jaya P. N. Bishwal Sequential Maximum Likelihood Estimation in Nonlinear Nonmarkov Diffusion Type Processes	107-124
Said R. Grace and Irena Jadlovská Oscillatory Behavior of Odd-order Nonlinear Differential Equations with a Nonpositive Neutral Term	125-136
Raziye Mert, Lynn Erbe, and Thabet Abdeljawad A Variational Approach of the Sturm-liouville Problem in Fractional Difference Calculus	137-148
Mohammad Reza Heidari Tavani Existence Results for Fourth-order Elastic Beam Equations on the Real Line	149-163
Renhai Wang, Yangrong Li, and Fuzhi Li Probabilistic Robustness for Dispersive-dissipative Wave Equations Driven by Small Laplace-multiplier Noise	165-183
Meihua Dong, Sangjin Kim, and Jiandong Yin Group Actions with Topologically Stable Measures	185-199
K. Anitha, M. N. Srinivas, and V. Madhusudana Stochastic and Delay Analysis of Two Preys and One Predator Ecological System with Competition among Preys and Self Interaction	201-224

Guangying Lv, Jinqiao Duan, Liang Wang, and Jiang-lun Wu Impacts of Noise on Ordinary Differential Equations	225-236
Miaomiao Gao, Feng Hu, and Zhaojun Zong Law of Large Numbers and Central Limit Theorem for Independent and Non-Identical Distributed Random Variables under Sublinear Expectations	237-256
Pengyan Zhang, Weiguo Yang, and Bei Wang The Strong Law of Large Numbers for Multivariate Functions of Continuous-state Nonhomogeneous Markov Chains	257-269
George E. Chatzarakis and Irena Jadlovská Difference Equations with Several Non-Monotone Deviating Arguments: Iterative Oscillation Tests	271-298
L. Hatvani Smith-type Stability Theorems for the Damped Linear Oscillator	299-318
Aurelian Cernea Some Remarks on the Solutions of a Second-Order Evolution Inclusion	319-330
Ji-hun Yoon and Sotheara Veng Asymptotic Analysis for Portfolio Optimization Problem under an Extended Heston's Stochastic Volatility Model	331-352
Bing Xie, Hongjie Guo, and Jing Li Continuity of Eigenvalues in Weak Topology for Regular Sturm-liouville Problems	353-365
K. C. Nguyen, T. V. Nhung, T. T. Anh Hoa, and N. C. Liem Lyapunov Exponents for Dynamic Equations on Time Scales	367-386
Yan Luo Upper and Lower Solutions Method for Impulsive Differential Inclusions with Nonlinear Boundary Conditions	387-396
Shiliang Chen, Weide Li, and Zhihui Ma Analysis on a Modified Leslie-gower and Holling-type II Predator-prey System Incorporating a Prey Refuge and Time Delay	397-421
Andrey B. Andreev and Milena R. Racheva Interpolated Finite Element Method for Some Fourth-order Elliptic Problems	423-444
Arjumand Seemab and Mujeeb Ur Rehman Existence and Stability Analysis by Fixed Point Theorems for a Class of Non-Linear Caputo Fractional Differential Equations	445-456
Jihoon Lee Dynamics of Global Attractor for a Semilinear Degenerate Parabolic Equation Involving Grushin Operators	457-474

Miao Han, Xuefeng Song, Wei Wang, and Huawei Niu	475-493
Pricing Equity-linked Foreign Exchange Option under a Regime-switching Multi-scale Jump-diffusion Model	
Chao Tang and Yong-kui Chang	495-529
$S^2\gamma$ -wpaa Functions and Applications to Stochastic Neutral Functional Equations with Infinite Delay	
Ricardo Aguilar-Lopez and Juan L. Mata-Machuca	531-544
On the Observability and State Estimation In a Class of Gene-Expression System	
Hongmei Bao	545-564
On Anti-periodic Solutions for Fuzzy Bam Neural Networks with Constant Delays On Time Scales	
T. E. Govindan	565-580
Trotter-kato Approximations of Mckean-vlasov Type Stochastic Evolution Equations in Hilbert Spaces	
Zhenshu Wen and Lijuan Shi	581-591
Dynamics of Bounded Traveling Wave Solutions for the Modified Novikov Equation	
Svetoslav Markov, N. Kyurkchiev, Anton Iliev, and A. Rahnev	593-607
A Note on the Log–logistic and Transmuted Log–logistic Models. Some Applications	
Xiang Liu, Baoguo Jia, Lynn Erbe, and Allan Peterson	609-628
Stability Results for Nonlinear Fractional Order H-difference Systems	
Manseob Lee	629-635
Measure Expansiveness for C^1 Generic Diffeomorphisms	
Yang Wu, Jian-Ping Sun, and Ya-Hong Zhao	637-651
Positive Solutions of a Fourth-order Periodic Boundary Value Problem with Parameter	
Hwajoon Kim	653-662
The Solution of the Heat Equation Without Boundary Conditions	
Shufan Wang, Wenting Wang, and Hua Liu	663-672
A Delayed Predator-prey Model with Holling Iv Functional Response and Prey Refuge	
Ratinan Boonklurb, Keerati Kaewrak, and T. Treeyaprasert	673-689
Solution Profiles Beyond Quenching for Singular Semilinear Parabolic Problems	

Jingyun Lv and Xiaoyuan Yang Approximate Controllability of Hilfer Fractional Neutral Stochastic Differential Equations	691-713
Svetoslav Markov, Nikolay Kyurkchiev, A. Iliev, and A. Rahnev On the Approximation of the Generalized Cut Function of Degree $p + 1$ by Smooth Hyper-Log-Logistic Function	715-728
Md Shafiqul Islam A Family of Random Maps Which Posses Infinite Absolutely Continuous Invariant Measures	729-742
T. Candan Existence of Nonoscillatory Solutions of Higher Order Nonlinear Mixed Neutral Differential Equations	743-755
Nikolay Pavlov, Anton Iliev, Asen Rahnev, and Nikolay Kyurkchiev On Some Nonstandard Software Reliability Models	757-771
Octavia-maria Bolojan and Radu Precup Hybrid Delay Evolution Systems with Nonlinear Constraints	773-790
Snezhana Hristova and Peter Kopanov Stability of Neural Networks with Random Impulses	791-801
Donal O'Regan General Lefschetz Fixed Point Theory For Multivalued Maps	803-818
Atanaska Georgieva Solving Two-Dimensional Nonlinear Volterra-Fredholm Fuzzy Integral Equations by Using Adomian Decomposition Method	819-835
Pradeep G. Chhetri and Aghalaya S. Vatsala Existence of the Solution in the Large for Caputo Fractional Reaction Diffusion Equation By Picard's Method	837-851
Qianhong Zhang, Fubiao Lin, Guiying Wang, and Zuqiang Long Existence and Stability of Periodic Solutions for Stochastic Fuzzy Cellular Neural Networks with Time-Varying Delay on Time Scales	851-871
G. E. Chatzarakis, M. Deepa, N. Nagajothi, and V. Sadhasivam On the Oscillation of Three Dimensional α -fractional Differential Systems	873-893
Lina Ma and D. Kannan Valuation of Reverse Mortgage with Dependent Joint Lives	895-925
Yali Dong and Jing Hao Stabilization of Vector Third-order Systems Via a Static Output-feedback Control With Stabilization Delays	927-942
Hua Liu, Yong Ye, Yumei Wei, Ming Ma, and Jianhua Ye	943-953

Dynamic Study of a Predator-prey Model With Weak Allee Effect
and Holling Type-iii Functional Response

Jingyun Lv, Juan Shang, and Yang He **955-972**
Optimal Feedback Control for a Class of Fractional Integrodifferential
Equations of Mixed Type In Banach Spaces

Dongdong Gao and Jianli Li **973-987**
Applications of Variational Methods to Impulsive Fractional Differential
Equations with a Parameter

Content **989-993**

Author Index **995-996**
